

How To Get Started Guide

ASAPIO Integration Add-on

November 20th, 2023

Checklist

These are the steps you need to do to get the SAP system set up for the workshop.

- ☐ Installed the framework transport (ERDK904462)
- ☐ Installed the Solace connector package (ERDK904501)
- ☐ Activated BC-Sets
- ☐ Installed the preconfigured content (ERDK904591)
- ☐ Added necessary roles to WF-BATCH / SAP_WFRT
- ☐ Adapted the RFC destinations

Follow the steps below to complete the checklist.

Base Configuration

Download and import into your SAP system from here:

<https://asapio.freshdesk.com/discussions/topics/14000020247>

1. Framework (Only if this is your first connector): **(ERDK904462)**
2. Connector to Solace: **(ERDK904501)**

Import configuration

3. Activate BC-Set:
 - Transaction: **SCPR20**
 - BC-Set: **/ASADEV/ACI_BCSET_FRAMEWORK_SOLC**
 - Activate with default settings
4. Additional transport with preconfigured content: **(ERDK904591)**
<https://asapio.freshdesk.com/support/discussions/forums/14000131371>

Add Roles and Authorizations to your SAP User and SAP Workflow User.

5. At least one SAP-User will need the administrator role to use the ASAPIO Monitor etc.: **/ASADEV/ACI_ADMIN_ROLE**
6. Technical / system user like "WF-BATCH" or "SAP_WFRT" will need role:
/ASADEV/ACI_JOB_ROLE
https://asapio.com/docs/installation/#roles_and_authorizations

Note: If you don't know your technical system user then go to transaction SWU3 --> Maintain Runtime Environment --> Configure RFC Destination. This needs to be generated and on the right side it will show you the technical system user.

Automatic Workflow Customizing

Check Event Linkages

- ✓ Maintain Runtime Environment
 - ✓ **Configure RFC Destination**
 - ✓ Maintain Workflow System Administrator
 - ✓ Maintain Active Plan Version
 - ✓ Classify Decision Task as General
 - ✓ Document Generation/Form Integration
 - ✓ Maintain Time Units
 - ✓ Schedule Background Job for Workflow Deadline Monitoring
 - ✓ Schedule Background Job for Work Items with Errors
 - ✓ Schedule Background Job for Condition Evaluation
 - ✓ Schedule Background Job for Event Queue
 - ✓ Schedule background job for clearing report
- ✗ Maintain Definition Environment
- ✓ Maintain Additional Settings and Services
- ✓ Classify Tasks as General
- ✗ Guided Procedures

Configure RFC Destination

Component
SAP_BASIS: SAP Business Workflow/WebFlow

Execution
Automatic/Manual

Function
The workflow runtime system always carries out its tRFC (tr the logical destination WORKFLOW_LOCAL_XXX (xxx stands the client).

The workflow runtime system only operates within one client logical destination, the system-wide uniqueness of this nam

If you execute this activity automatically, the logical RFC de WORKFLOW_LOCAL_XXX is created (if not yet available). Thi use WF-BATCH system user).

If you belong to the user group SUPER and the user WF-BA created and automatically receives the maximum authorizat

Steps required to establish connectivity (Usually done by the SAP BASIS Team)

7. Create RFC destinations

Create a new RFC destination of type "G" (HTTP Connection to External Server).

- Transaction: **SM59**
- Create new destination of type "G"
- Specify Target Host and Service No. (Port): endpoint for the SAP Advanced Event mesh

RFC Destination ACI_ADVANCED_EM

Connection Test

RFC Destination: ACI_ADVANCED_EM

Connection Type: G HTTP Connection to External Serv Description

Description

Description 1: SAP Advanced EventMesh

Description 2:

Description 3:

Administration Technical Settings Login & Security Special Options

Target System Settings

Target Host: mr-ud0mj6ykvj.messaging.solace.cloud Service No.: 9443

Path Prefix:

HTTP Proxy Options

Global Configuration

Proxy Host:

Proxy Service:

Proxy User:

Proxy PW Status: is initial

- Credentials or certificates for authentication can be specified on tab Logon & Security:

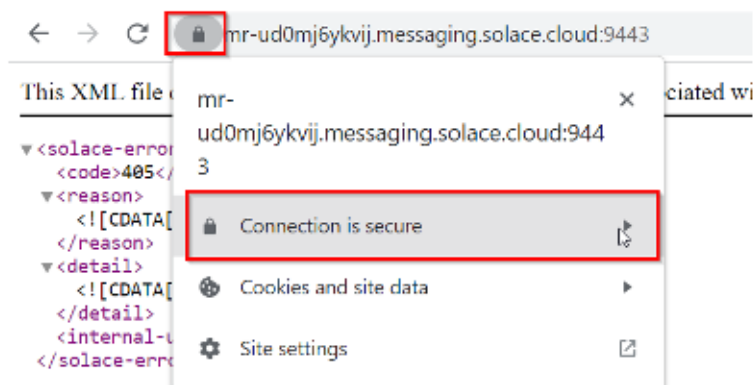

When activating SSL please ensure that the necessary certificates are in the selected Certificate List (keystore) in your SAP system.

To get the necessary certificates for the https/SSL connection you can follow the next section to download them via your browser.

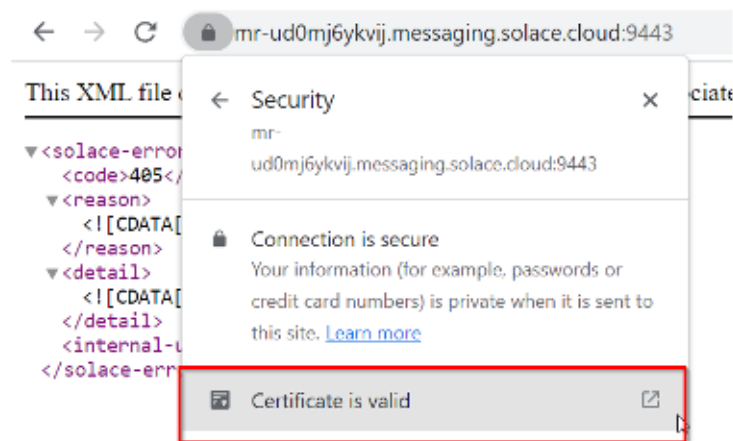

Browser specific way to get a certificate.

Note: This is just one option to get a certificate.

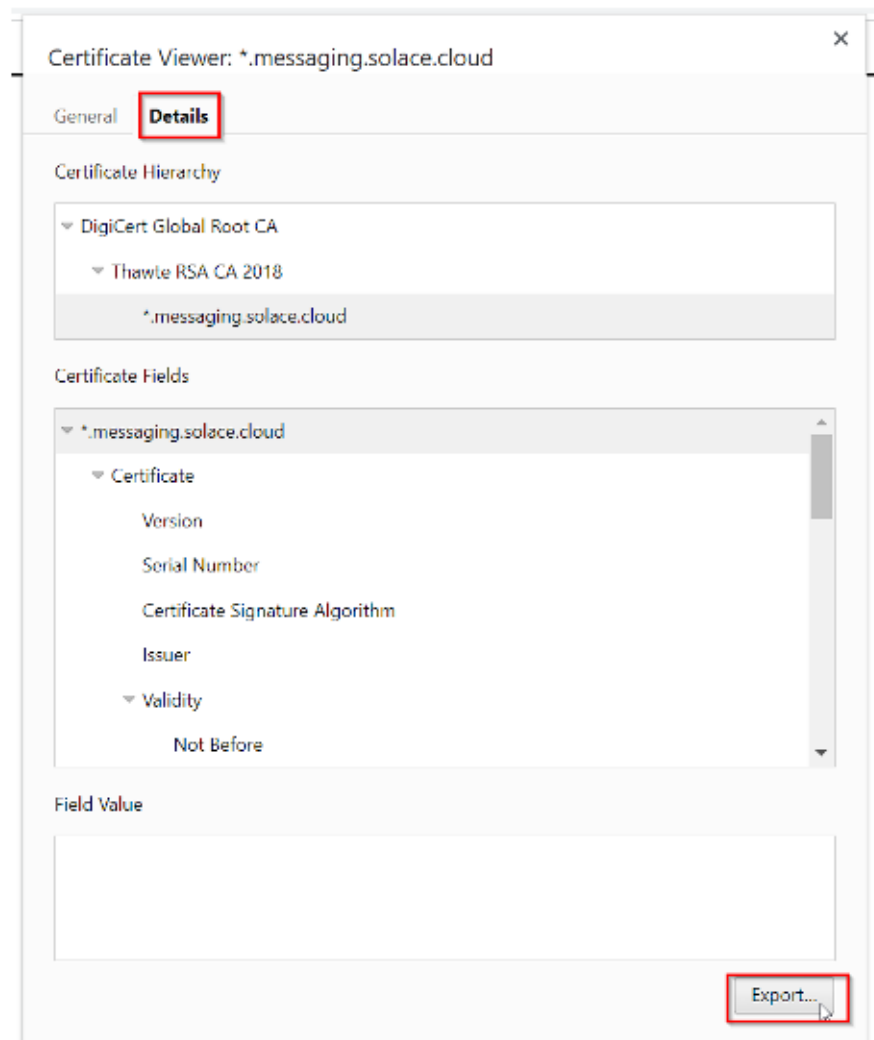

Open your endpoint that is used in SM59 with your browser (here we used Google Chrome) and click on the padlock -> Connection is secure.

Click on Certificate is valid.

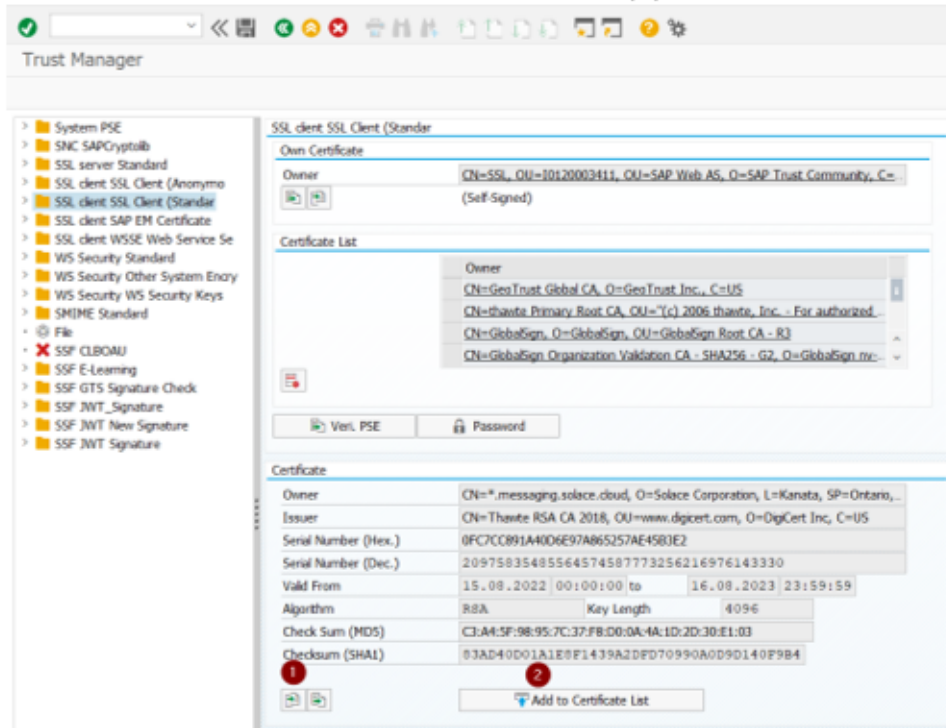

Go to the Details tab and export the file to save it.

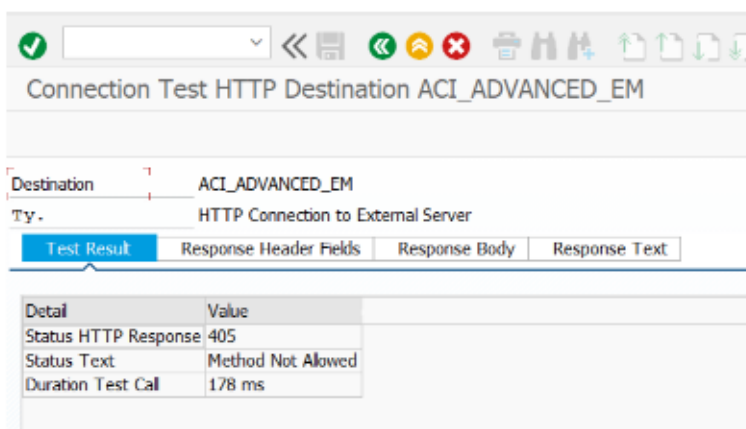

In the next step this certificate can be added to the Trust Store in SAP.

8. Add Certificates to Trust Store

- Transaction: **STRUST**
- Select **Certificate List** as used in RFC destination created above
- Click button **Import certificate** (1)
- Click button **Add to Certificate List** (2)

After adding the certificates, you will receive a 405 “Method not allowed” in the connection test of transaction SM59, which is correct as this means it's reaching the Advanced Event Mesh. The Asapio Integration Add-On will later build the complete URL together leading to a successful response with a 200.

Connection Test should result in a 405. The framework will later build the complete URL together which results in a 200. Here we can see it in transaction /n/asadev/aci_monitor which is explained later in this document.

Q/ Cloud Instance No.	Replication Object	Timestamp	Cloud Response	Co...	Cloud Response	Variant User	Bytes	Data preparation ti...	Cloud call ti...	Data processing ti...
SAP_AEM_POC	MATERIAL_CHANGE	20.10.2023 16:27:35	200 OK			WF-BATCH	430	00:00:00	00:00:01	
SAP_AEM_POC	BUSINESS_PARTNER_CHANGE	20.10.2023 16:08:01	200 OK			WF-BATCH	321	00:00:00	00:00:01	
SAP_AEM_POC	SALESORDER_CHANGE	20.10.2023 15:56:19	200 OK			WF-BATCH	1.615	00:00:00	00:00:02	
SAP_AEM_POC	BUSINESS_PARTNER_CHANGE	20.10.2023 15:33:32	200 OK			WF-BATCH	320	00:00:00	00:00:00	
SAP_AEM_POC	BUSINESS_PARTNER_CHANGE	20.10.2023 14:24:13	200 OK			WF-BATCH	320	00:00:00	00:00:01	

9. Add your RFC-Connections to the Asapio Integration Add-On and remove the initial RFC-Destination.

- Go to transaction SPRO → IMG → Asapio Integration Add-On → Connection and Replication Object Customizing.
- Double-click on Instance SAP_AEM_POC and remove both RFC-Destinations "ACI_SOLACE_DEMO_SCOTT".
- Now add your new created RFC-Destination.

Before:

Instance: SAP_AEM_POC

Connections

RFC Dest. (Upload)	ACI_SOLACE_DEMO_SCOTT
RFC Dest. (Download)	ACI_SOLACE_DEMO_SCOTT
Web Service Port	
System ID	
ISO Code	UTF-8
<input type="checkbox"/> Threshold Alerting	
Agent ID	
Agent Type	
Network ID	
Cloud Type	SOLACE

After:

Change View "Connections": Details

Instance: SAP_ARM_POC

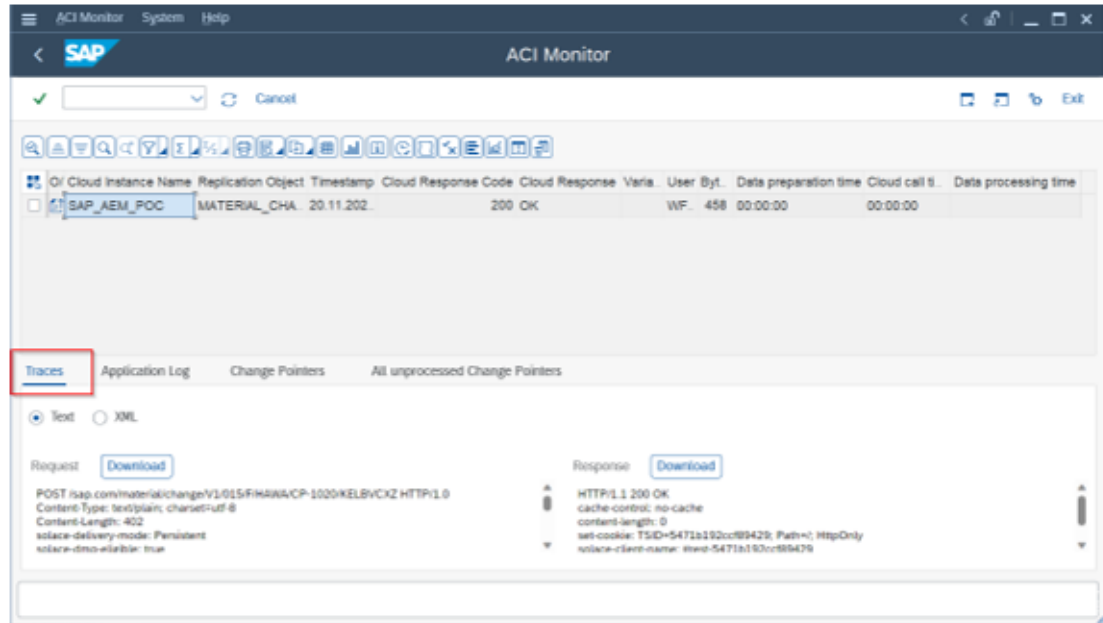

Connections	
RFC Dest. (Upload)	ACE_ADVANCED_EM
RFC Dest. (Download)	
Web Service Port	
System ID	
ISO Code	UTF-8
<input type="checkbox"/> Threshold Alerting	
Agent ID	
Agent Type	
Network ID	
Cloud Type	SOLACE

With these steps prepared, we are all set to send messages to Solace. If you have any questions or require further assistance, please feel free to reach out to us. We look forward to a successful workshop!

10. Trigger and test an event

- Go to transaction **BP**
- Change Business Partner
- Save
- After saving the event will be created and the JSON sent to Solace.
- Go to transaction **/n/asadev/aci_monitor**
- You will be able to see the event and the message that was sent to Solace

- To see the sent data select the tab "Traces":

Configuration Details

With the import of the transport including the predefined content you will have the following outbound objects in your system:

Outbound Objects		Replication Object	Data Extraction Function Module	CSV Name	Message Type	Type
